

NATIONWIDE CHILDREN'S
When your child needs a hospital, everything matters.

May 13, 2020

Patient Name: Kirill Kondrashev
Country: Ukraine
Date of Birth: November 15, 2019

To Whom It May Concern,

Kirill Kondrashev, 6 months of age has been approved for treatment at Nationwide Children's Hospital in our Neuromuscular Gene Therapy Department.

This therapy is time sensitive. His disease, spinal muscular atrophy type 1, is a progressive neuromuscular disease, where children progressively lose motor function and neurons are dying continuously. They remain cognitively normal. To obtain maximum benefit for Kirill, he should receive Zolgensma® (onasemnogene abeparvovec-xioi) as soon as possible and no later than his 2nd birthday (November 15, 2021).

If we wait to treat him until after the COVID-19 pandemic, he may lose more of his motor function, and may not be able to ever get it back.

Family must pay in full \$2,325,000.00 USD before proceeding with the treatment. If your organization would have any questions, please contact Nationwide Children's Hospital using the information provided below.

Sincerely,

**NATIONWIDE CHILDREN'S HOSPITAL
